

S6030

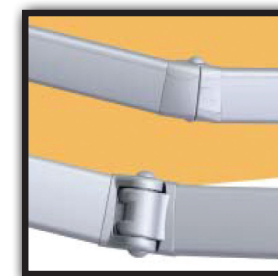

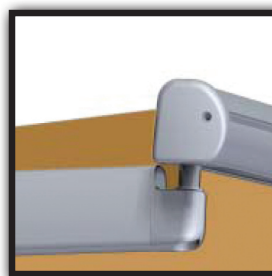

SunShelter Series

The **SunShelter S6030** is Durasol's top of the line retractable awning. This extraordinary unit introduces a patented tipping system, which allows for a perfect closing of the awning even with a 55° pitch. As the awning is extended, it protrudes out straight, then tips down. The sleek design of the semi-cassette enables the unit to mount flush against the wall of your building or home. This tray in the semi-cassette also acts as a center support, adding stability. The unit is engineered with a rust proof body and strong, durable, PVC coated, double cable elbows.

The **SunShelter S6030** is a practical and elegant home improvement. When retracted, the fabric is neatly encased in the concealed fabric hood, giving a neat compact appearance.

Width Ranges	7' - 40'
